

PROJECT DOCUMENTATION

Import Data Using Transform Maps (Spreadsheet)

Date	01-10-2026	Team ID	SWTID-2026-5415
Project Name	Import Data Using Transform Maps (Spreadsheet)	Maximum Marks	Not specified

1. INTRODUCTION

Project Title: Import Data Using Transform Maps (Spreadsheet). **Purpose:** Import spreadsheet records into ServiceNow using Import Sets and Transform Maps and verify the resulting data and access.

2. IDEATION PHASE

Problem: reliable spreadsheet-to-ServiceNow import and transformation. **Empathy:** administrators need accurate, repeatable and secure processing. **Brainstorming:** Import Set, Transform Map, Employee reference, dot-walking, ACLs and testing.

3. REQUIREMENT ANALYSIS

Customer journey: Prepare → Load → Transform → Verify → Secure. **Functional requirements:** spreadsheet import, mapping, target records, Employee reference, ACLs and validation. **DFD:** Spreadsheet → Import Set → Transform Map → Target Table.

4. PROJECT DESIGN

The proposed ServiceNow workflow directly addresses the spreadsheet import and transformation problem. Architecture uses spreadsheet, Import Set, Transform Map, target table, Employee reference, Department dot-walking and security. The completed evidence also includes an employee list report and dashboard charts for location and department.

5. PROJECT PLANNING & SCHEDULING

Sprint 1: spreadsheet import and Transform Map. **Sprint 2:** relationship, security and testing. Actual sprint dates were not supplied and are therefore not invented.

6. FUNCTIONAL AND PERFORMANCE TESTING

Functional checks cover import, transformation, references and ACL behavior. Performance values should be recorded from the completed instance. The supplied screenshots provide visual evidence of spreadsheet source data and the resulting employee reporting view.

Test Area	Expected / Required Check	Recorded Result
Spreadsheet import	Spreadsheet data loads through Import Set	Verify in completed instance
Transform	Source fields map to target fields	Verify in completed instance
Reference / dot-walking	Employee relationship and Department access work	Verify in completed instance
ACL / access	Configured Read/Write rules are enforced	Verify in completed instance
Reporting	Employee records are visible in report/dashboard widgets	Evidence supplied

7. RESULTS

The supplied evidence shows the employee spreadsheet source and a ServiceNow reporting/dashboard view containing an Employee List Report, Employees by Location chart and Employees by Department chart. These screenshots have been added below.

Employee ID	Name	Email	Department	Location	
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad	
SB-0002	Sandeep Gujja	test2@gmail.com	ServiceNow	Hyderabad	
SB-0003	Meghana katoju	test3@gmail.com	ServiceNow	Hyderabad	
SB-0004	Ajay Kumar	test4@gmail.com	ServiceNow	Hyderabad	
SB-0005	Bitla Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad	
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad	
SB-0007	Yaswanth Nikku	test7@gmail.com	ServiceNow	Hyderabad	
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad	
SB-0009	Praneeth S	test9@gmail.com	ServiceNow	Hyderabad	
SB-0010	Ravi Teja	test10@gmail.com	ServiceNow	Hyderabad	
SB-0011	Abhishek S	test11@gmail.com	ServiceNow	Hyderabad	
SB-0012	Rakesh Bhoomani	test12@gmail.com	ServiceNow	Hyderabad	
SB-0013	Mounika K	test13@gmail.com	ServiceNow	Hyderabad	
SB-0014	Sushanth J	test14@gmail.com	ServiceNow	Hyderabad	
SB-0015	Srinu Nandipalli	test15@gmail.com	ServiceNow	Hyderabad	

Figure 1. Employee spreadsheet source data used for the project.

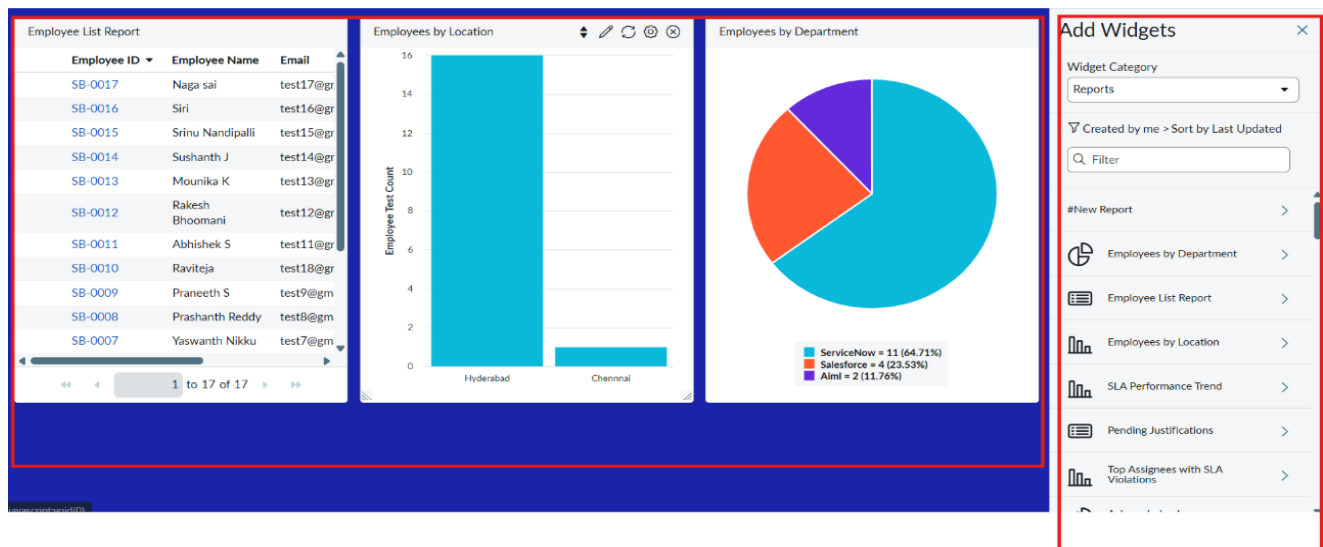

Figure 2. ServiceNow employee report/dashboard view with location and department widgets.

8. ADVANTAGES & DISADVANTAGES

Advantages: (1) Provides a repeatable way to move employee spreadsheet data into ServiceNow; (2) Transform Maps provide defined source-to-target field mappings; (3) Employee ID can be used to identify existing records when configured as the unique/coalesce field; (4) Employee reference and Department dot-walking support related employee information; (5) Read/Write ACLs and impersonation support controlled access validation; (6) Reports and dashboard widgets make imported employee data easier to verify and present.

Disadvantages / limitations: (1) Import quality depends on the spreadsheet having correct and consistent source values; (2) incorrect field mapping or unique-identifier configuration can produce incorrect updates or duplicate records; (3) reference and dot-walking configuration adds setup and maintenance effort; (4) ACL configuration requires careful testing for different users; (5) the report/dashboard is dependent on the quality and completeness of the imported target records.

9. CONCLUSION

The project demonstrates how spreadsheet employee data can be imported into ServiceNow using Import Sets and Transform Maps, then verified through target records, relationships, access controls and reporting. The reporting screenshot further demonstrates that the imported employee data can be presented through list and chart widgets.

10. FUTURE SCOPE

Future enhancements may include stronger source-data validation, additional reporting widgets, automated monitoring of failed imports, and more detailed role-based access testing, subject to team approval.

11. APPENDIX

Appendix should contain actual configuration screenshots, transform results, access-test evidence and any approved demo/repository information.

PROJECT TEAM DETAILS

Team Name	Transform Map Team
Team ID	SWTID-2026-5415
Team Size	4
Team Leader	Surya V — 715024205030
Members	Surya V (715024205030); Ramya G (715024205026); Priyadarshini (715024205024); Pooja Sri (715024205022)
College	Suguna College of Engineering
Department	Information Technology
Guide	Suganya
Academic Year	2024–2028
Date	01-10-2026
