

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	01-10-2026	Team ID	SWTID-2026-5415
Project Name	Import Data Using Transform Maps (Spreadsheet)	Maximum Marks	4 Marks

Technical Architecture: the project uses ServiceNow configuration capabilities together with a spreadsheet source.

Import Data Using Transform Maps (Spreadsheet) – Solution Architecture

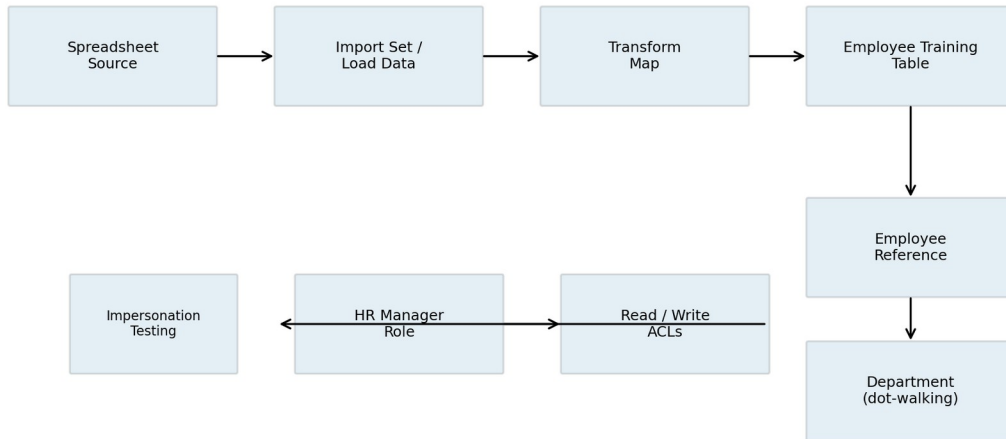

Table-1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	ServiceNow forms and lists used to view/manage records.	ServiceNow UI
2	Data Source	Spreadsheet containing source records.	Excel / Spreadsheet
3	Import	Receives spreadsheet data into ServiceNow.	Import Sets / Load Data
4	Transformation	Maps source fields to target fields.	Transform Map
5	Data Relationship	Links records to the employee record.	Reference Field / sys_user
6	Related Data	Reads Department through Employee.	Dot-walking
7	Security	Controls record access.	Roles + ACLs
8	Validation	Tests access behavior.	Impersonate

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1	Data Accuracy	Defined source-to-target mappings.	Transform Map
2	Security	Role-based Read/Write control.	ACLs
3	Maintainability	Configuration is separated into import, transformation and security.	ServiceNow

4	Performance	Actual response/import measurements should be recorded from the completed instance.	Project test results
